PROFESSIONAL EXPERIENCE:

ISDA

Senior Full Stack Developer / Project Manager October 2018 - Current

- Created a analytics pipeline and a ETL process using Google Tag Manager, AWS API Gateway, Lambda (Python), Kinesis Firehose, S3, Matillion and Looker.
- Built multiple websites and sections on other sites using PHP, React, Redux, and Wordpress..
- Managed multiple projects and coordinated requirements to a team of developers and UI/UX artists. Used collaboration tools including JIRA, Trello and Confluence for communication, documentation and project status. Used Sketch, Invsion and Figma to manage all website site deisgns.

Utility

Full Stack Developer/ Project Manager June 2017 - October 2018

- Built multiple websites for various clients that used a various technologies like PHP, Node, and React.
- Managed multiple iOS and Android projects and organized development teams to make sure project deadlines were met.
- Managed clients and delivered to them designs and applications for them to review. Upon review, I would relay any feedback to the corresponding team and organize all of our tasks on Trello.
- Deployed, migrated and maintained multiple websites and scalable environments using AWS.

PROJECTS:

ISDA Committees

- Managed a UI/UX team to create designs for the committees site. Using those designs and Figma, built an internal committee management system and a separate external user committee section with PHP, React and Wordpress for content / user managment.
- Build an internal REST API with PHP to allow for external websites to pull all related and needed committee information.
- Built an internal emailing system on the internal site with PHP that utilizes SendGrids API to send memos, invites and sensitive documentation to thousands of committee members.
- Initiated cloud migration process by moving all internal confiednetial files to S3.

Analytics Pipeline

- Built a real time analytics pipeline that captures millions of live events for multiple websites with Google Tag Manager, AWS API Gateway and Kinesis Firehose and S3.
- Built an ETL pipeline using Matillion that takes data from S3 and transforms and stores it into Redshift and using Looker to view that data in a more accessible way company wide.

EDUCATION AND CERTIFICATIONS:

NYC College of Technology *Bachelors of Technology in Computer Systems* 2016

AWS Certified Solutions Architect - Associate

10/2018
